

MAG_ONLY: unchanged observations, gated patch residuals

Existing implementation under evaluation; architecture does not imply empirical superiority or novelty.

Controls at the same residual location

PLAIN: $g = 1$ | C3: persistence rule | TOKEN_GATE: $\text{sigmoid}(W_g h + b_g)$, +513 parameters

TOKEN_GATE_ENTROPY: same learned gate + fixed normalized Bernoulli-entropy penalty ($\lambda = 0.01$).

Gate inputs exclude future targets, clean inputs, fault masks and generator state. No clipping of the observed model input.
